

RYEGRASSES

Achieve Diploid Italian Ryegrass

Improved winter production and faster establishment

Lolium multiflorum

A late heading variety with excellent rust resistance which maintains its quality late into the season. Good tillering ensures excellent recovery from grazing. Its upright growth habit prevents lodging during hay and silage production. Has late season maturity giving high spring yields.

ABOUT THIS VARIETY

Achieve is a diploid Italian ryegrass that has been developed for improved winter production and faster establishment. Achieve has later season maturity for high spring yields and is ideal for grazing, silage and hay. It has excellent rust resistance, and its upright growth habit prevents lodging during hay and silage production. It is suitable for all livestock types and has the ability to recover from heavy grazing.

Achieve can be used by farmers in WA who have irrigation or are in areas with summer rainfall events, or districts that can get late spring rain. It can be over sown into older pastures in autumn to provide a boost to winter and spring production, with benefits extended into the following summer, or as a new pasture sown with the appropriate clovers.

Achieve can be used as a transition crop following summer forage in lieu of perennial grasses where farmers are looking to do remedial work to paddocks prior to sowing a full irrigation pasture. Achieve will produce high quality grazing and silage and, where managed appropriately, can provide excellent high-quality pasture for up to two years.

Achieve has the winter production of an annual with the later production of an Italian ryegrass. It is able to grow in areas of low

QUICK FACTS

-  **TYPE & PERSISTENCY**
Biennial
-  **MIN RAINFALL**
450 mm+
-  **SOIL & PH**
Soil range: Sand to Heavy · pH 5+ (CaCl₂)
-  **SOWING RATE**
20–25 kg/ha General
-  **TOLERANCES**
Mild Low pH, Waterlogging
-  **END USE**
Grazing, Hay, Silage
-  **LIVESTOCK**
Beef, Dairy, Sheep, Equine
-  **PLOIDY**
Diploid
-  **HEADING DATE**
Mid-late

ABOUT THIS VARIETY (CONTINUED)

soil fertility due to its increased nutrient utilisation.

KEY ATTRIBUTES

- ✓ Late heading, holds quality late into the season
- ✓ Excellent rust resistance
- ✓ Good tillering, recovers well from heavy grazing
- ✓ Later season maturity for high spring yields
- ✓ Upright habit prevents lodging for hay and silage

PLANTING & GRAZING NOTES

Over sow into older pastures in autumn to provide a boost to winter and spring production, or sow as a new pasture with the appropriate clovers. Achieve has the ability to recover from heavy grazing, and its upright growth habit prevents lodging during hay and silage production.

DISEASE & PEST RESISTANCE

Excellent rust resistance.

STAND LIFE

Where managed appropriately, Achieve can provide excellent high-quality pasture for up to two years.
