FORAGE & GRAIN CROPS

Bannister Oats

High-yielding milling oat for grain and hay

Avena sativa

Bannister is a high-yielding, mid-season, tall-dwarf milling oat variety suitable for hay production, with fast establishment and a lot of bulk production from autumn all the way through to spring.

ABOUT THIS VARIETY

Bannister is a high-yielding, mid-season, tall-dwarf milling oat that establishes quickly and produces a lot of bulk from autumn through to spring. It suits growers who want grain, oaten hay or both, and is widely grown on WA's sands and gravels.

Sow from autumn into early winter after a reliable break, into moist soil at a typical cereal depth.

QUICK FACTS

TYPE & PERSISTENCY
Annual

SOWING RATE
55–130 kg/ha General

END USE
Grain, Hay, Grazing

LIVESTOCK
Sheep, Beef, Equine

KEY ATTRIBUTES

- High-yielding, mid-season milling oat
- Bulk production from autumn through to spring
- Grows on a wide range of soils, including acidic sands and gravels
- Fast establishment
- Suitable for grain and oaten hay

PLANTING & GRAZING NOTES

The crop can be lightly grazed before stem elongation and then locked up, although grazing may reduce grain yield in a tight season. As with any young cereal, watch for nitrate after frost or drought stress.
