

SUB-TROPICAL GRASSES

Carpet Grass

Short perennial, stoloniferous, dense mat-like grass

Carpet grass is a good choice for areas with poor soil conditions, low fertility and shade. Not drought or saline tolerant. An alternative to Kikuyu and Bermuda Couch Grass. Coated and treated with Gaucho.

ABOUT THIS VARIETY

Carpet grass is a short, stoloniferous perennial that forms a dense, mat-like spreading sward. It is a good choice for areas with poor soil conditions, low fertility and shade, and an alternative to Kikuyu and Bermuda Couch Grass.

Carpet grass is not drought or saline tolerant. It is sown for permanent pasture or as turf, with separate sowing rates for each, and is sold as coated seed treated with Gaucho.

QUICK FACTS

-  **TYPE & PERSISTENCY**
Perennial
-  **MIN RAINFALL**
650 mm+
-  **SOWING RATE**
8–8 kg/ha Pasture, 100–100 kg/ha Turf
-  **TOLERANCES**
Low pH, Waterlogging
-  **END USE**
Grazing, Permanent pasture, Turf
-  **GROWTH SEASON**
Warm-season
