

RYEGRASSES

Dunstan Perennial Ryegrass

Strong rust resistance and persistence

Lolium perenne

A diploid perennial ryegrass, produces high quality feed during winter and spring. Its mid maturity makes it a suitable option for medium rainfall zones and will make a great backbone to a pasture plan with a good chance of finishing strong in a variable season.

ABOUT THIS VARIETY

Dunstan is a diploid perennial ryegrass that produces high quality feed during winter and spring, with strong rust resistance and persistence.

Its mid maturity makes it a suitable option for medium rainfall zones and will make a great backbone to a pasture plan with a good chance of finishing strong in a variable season.

QUICK FACTS

-  **TYPE & PERSISTENCY**
Perennial
-  **MIN RAINFALL**
600 mm+
-  **SOIL & PH**
Soil range: Sand to Heavy · pH 5.5+ (CaCl₂)
-  **SOWING RATE**
15–25 kg/ha General
-  **TOLERANCES**
Mild Salinity
-  **END USE**
Grazing
-  **PLOIDY**
Diploid
-  **HEADING DATE**
Mid

KEY ATTRIBUTES

- ✓ High quality feed during winter and spring
- ✓ A great backbone to a pasture plan
- ✓ Mid maturity, suited to medium rainfall zones
- ✓ Good chance of finishing strong in a variable season

DISEASE & PEST RESISTANCE

Strong rust resistance.
