FORAGE & GRAIN CROPS

Ezigraze Forage Oats

Grazing oat that recovers well for multiple grazings

Avena sativa

EziGraze is a fast-establishing, highly tillered spring x winter oat that produces high-quality forage for grazing, hay and silage. It offers excellent recovery after grazing, supports multiple grazings, can be sown early without heading risk, and performs reliably across most soil types.

ABOUT THIS VARIETY

EziGraze is a spring x winter forage oat that fills the autumn and early winter feed gap. It establishes quickly, tillers heavily and recovers well after grazing, so it can be grazed several times when managed well, and it can be sown early without the risk of running to head.

The paddock can be closed after grazing to bulk up for hay or silage. Adding a legume such as vetch or field peas lifts protein.

QUICK FACTS

TYPE & PERSISTENCY
Annual

MIN RAINFALL
500 mm+

SOWING RATE
40–120 kg/ha General

END USE
Grazing, Hay, Silage

LIVESTOCK
Sheep, Beef, Dairy, Equine

KEY ATTRIBUTES

- Fast establishing and highly tillered
- Supports multiple grazings
- Performs reliably across most soil types
- Excellent recovery after grazing
- Can be sown early without heading risk
- Grazing, hay and silage

PLANTING & GRAZING NOTES

Graze once plants pass the pluck test, leave a reasonable stubble so the crop recovers, and rotate rather than set-stock. Nitrogen after grazing helps regrowth. Introduce stock gradually and provide roughage, as nitrate and grass tetany are known risks on lush cereal feed.
