

**RYEGRASSES**

# Victorian Perennial Ryegrass

Traditional hardy perennial for dryland grazing

*Lolium perenne*

Victorian is a traditional Australian perennial ryegrass valued for hardiness and persistence under dryland grazing in higher rainfall districts with reliable winter moisture.

## ABOUT THIS VARIETY

Victorian perennial ryegrass is a traditional type valued for its hardiness and persistence under dryland grazing. It suits higher rainfall areas with reliable winter moisture, and does best on moderately fertile loams and heavier soils that hold moisture.

Sown with a sub clover suited to your rainfall it gives a balanced, long-lived sheep or cattle pasture. Traditional types may carry endophyte, so check the seed's endophyte status with us before sowing for horses or sheep.

## QUICK FACTS

-  **TYPE & PERSISTENCY**  
Perennial
-  **MIN RAINFALL**  
450 mm+
-  **SOIL & PH**  
Soil range: Sand to Heavy · pH 4.8+ (CaCl<sub>2</sub>)
-  **SOWING RATE**  
25–35 kg/ha General
-  **TOLERANCES**  
Mild Salinity, Mild Waterlogging
-  **END USE**  
Grazing, Hay, Silage
-  **LIVESTOCK**  
Sheep, Beef
-  **HEADING DATE**  
Early

### KEY ATTRIBUTES

- ✓ Traditional Australian perennial ryegrass type
- ✓ Hardy and persistent under dryland grazing
- ✓ Suits higher rainfall districts with reliable winter moisture
- ✓ Commonly sown with sub clover

### PLANTING & GRAZING NOTES

Sow shallow into a firm, moist seedbed after the autumn break. Graze lightly once plants pass the pluck test, then rotationally, and avoid hard grazing over the first summer.
